# The VideoProbe of the future.

The Mentor Visual iQ is changing the way remote visual inspections are being performed. Leveraging artificial intelligence and cloud-based digital tools to help improve productivity, accuracy, and reliability of inspection data.

## Powerful analytics

Artificial intelligence is being utilized across industries and functions, the Mentor Visual iQ is designed to enable a user to leverage analytical models from multiple sources.

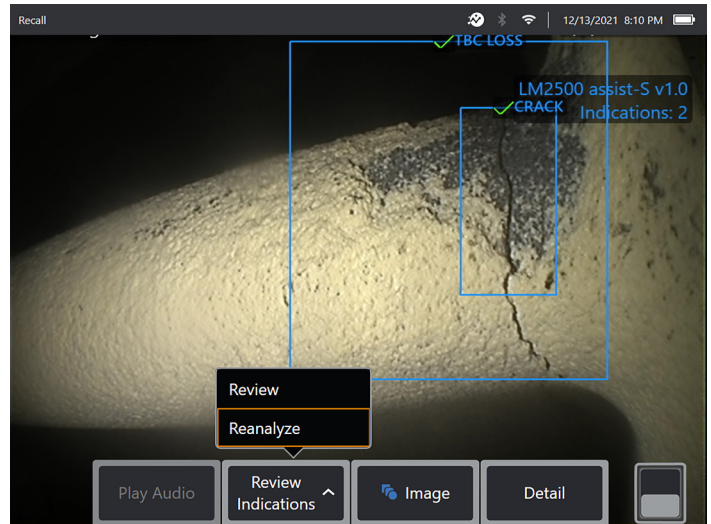

- Waygate Technologies Analytics. LM2500 assist and Blade Counter are analytics developed to improve reliability and data integrity
- Third Party Partner Analytics. Available directly on the Mentor Visual iQ, users can leverage Aiir Innovations' aviation commercial engine models for defect detection
- Third Party Private Analytics. For customers developing their own analytics, the Mentor Visual iQ enables deployment to a global team

Datasheets are available for each analytic to guide users through applicability and operating procedures.

## When and where you need them

The Mentor Visual iQ connects directly to the InspectionWorks Store to provide access to workflows and reference libraries. Available to all is the Public store which contains manuals, analytic data sheets, MDI templates and other reference materials. The Private store is available to InspectionWorks subscribers providing a secure repository for custom MDI workflows, analytics, reference documents, or any other resources your team may need to access and download on to their Mentor Visual iQ.

With Push2IW, data collected during an inspection is automatically pushed to the InspectionWorks Insight cloud, ensuring against data loss and reducing after-inspection data management tasks.

In this example image, the LM2500 assist analytic correctly identifies and characterizes crack and TBC loss.
